EOBD Code Readers

Save time and money, plus take the guess work out of fault finding and diagnosis with CAN enabled EOBD diagnostic tools. Interrogate your vehicle's engine and emission faults with our updated range of tools which reads and clears both pending and confirmed Diagnostic Trouble Codes (DTC's). The VS8800 is a new entry level tool which will display only the DTC number – the description can be looked up on the CD supplied. The VS8801 and VS8802 feature full colour screens and patented one-click I/M readiness function. Both the larger units will read live data direct from the vehicles ECU and the VS8802 will allow you to graph the data enabling fast interpretation of engine per formance. In the event that the software requires updating or the EOBD protocols are updated, the VS8801 and VS8802 may be updated using a USB inter face. The results from the VS8802 may be saved out to PC for sharing.

The VS8802 is also loaded with a Tech-Tips data base allowing you a more rounded description of the DTC fault and some ideas about where to look next to correct the fault – lik e having a professional technician on call 24/7.

See the table below for a full list of features and vehicle coverage.

Patented One-Click I/M Readiness Check

A faulty component monitored by EOBD does not always turn on the MIL light on the dash board straight away. The vehicle has to run through a drive cycle to pend, then confirm DT Cs, before then turning on the MIL light. Sealey 's VS8801 and VS8802 have a new feature which, using only one click of a button , can tell the technician which groups of sensors are ready for diagnosis and have gone through the drive cycle. F or Pre MOT work this is vital and enables the technician to confirm that the MIL light will not come back on during the MOT, creating a fail.
